Technical data

FEATURE	VALUE
Examples	more massive concrete foundations for higher wind loads, traffic camera deployments, traffic data recording for test purposes, combined applications
Scope of services	Development, design and implementation
Automotive reference	LED display system with BMW, test track near Aschheim
Automotive applications	Race tracks and test tracks
Special foundations	Custom-made based on structural calculations, in-house concrete workshop
Communication	Integration into the LVMS platform

Frequently asked questions

Which customized solutions are possible?

For example more massive concrete foundations for higher wind loads, traffic camera deployments and traffic data recording for test purposes, as well as individually combined traffic technology applications for practical use.

Are there solutions for the automotive industry?

Yes. Together with BMW, an individual LED display system was developed on the company's own test track near Aschheim that visually displays different scenarios during test drives.

Can foundations be custom-made?

Yes. Custom-made concrete foundations are produced in the in-house concrete workshop based on structural calculations.
